SUMMARY

Full-Stack Engineer and CS Undergraduate with 5+ years of software development experience building production-ready SaaS applications and high-concurrency systems. Proficient across Next.js, Node.js, and TypeScript, with active hands-on experience building low-level systems in Rust and AI applications using RAG architecture.

TECHNICAL SKILLS

Languages:	Rust, TypeScript, JavaScript, Go, Python, PHP, Dart
Frontend:	React, Next.js, Tailwind CSS
Backend & Databases:	Node.js, Express.js, Laravel
Tools & Core Concepts:	Git, Docker, REST APIs, RAG (Retrieval-Augmented Generation), Authentication (OAuth/JWT)

EXPERIENCE

Freelance Full Stack Developer | Independent 2021 – Present

- Architected and deployed end-to-end web applications for multiple clients, maintaining high uptime and optimizing core web vitals.
- Managed search engine presence, technical SEO, and content indexing for a specialized security equipment platform, improving search visibility and organic discovery.
- Engineered secure RESTful APIs and authentication systems handling concurrent multi-tenant database requests.
- Delivered production-ready SaaS applications with a focus on performance, scalability, and maintainable codebases.

PROJECTS

leetrs | Terminal LeetCode CLI & TUI Engine (93 Stars) GitHub

Tech Stack: Rust, GraphQL

- Built an interactive terminal-based LeetCode workspace with instant fuzzy search, difficulty/tag filtering, and native Neovim split integration.
- Implemented automated cross-browser cookie extraction across Chromium and Gecko browsers for zero-friction authentication.
- Developed an asynchronous test runner and solution submission pipeline providing real-time runtime and memory performance benchmarks.

Ratatui | Terminal UI Library in Rust (23k+ Stars) GitHub | Pull Request

Tech Stack: Rust

- Contributed to the core Ratatui library (over 23k stars), adding `Marker` support (Braille, Octant, HalfBlock, Quadrant) to the `Sparkline` widget.
- Engineered 2-column pseudo-pixel rendering to double horizontal data density while maintaining 100% backward compatibility and test coverage.

Botify | WhatsApp Messaging Automation Platform GitHub

Tech Stack: TypeScript, Node.js, BullMQ, Redis

- Engineered a concurrent WhatsApp workflow automation engine to streamline business communication.
- Implemented event-driven message queues to process outbound and inbound messages reliably without rate-limit throttling.
- Designed the system architecture for high availability and scalability across multiple concurrent sessions.

Restaurant Ordering & SaaS Platform

Tech Stack: VueJS, Laravel, Tailwind CSS

- Architected a multi-tenant SaaS platform serving restaurant management, featuring isolated tenant data and dynamic routing.
- Developed a complete restaurant ordering solution including administration, business management features, and real-time order tracking.

SyllabiQ | Academic Chat Assistant GitHub

Tech Stack: Python, RAG, Vector Database, LLMs

- Built an AI-powered academic assistant leveraging Retrieval-Augmented Generation (RAG) to provide contextual answers to syllabus-based questions.
- Optimized document chunking strategies and implemented a semantic retrieval pipeline for accurate long-form academic document parsing.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering | Government College of Engineering Kannur 2023 – 2027

- **Development & Extracurriculars:** Vice Chair at WeCode GCEK
